Kangen Water Experience within the Riverside Park Hotel

Dear Sir/Madam,

I quiet happily write to recommend the use of Kangen Water in a hospitality industry given our experience here in the Riverside Park Hotel.

We have been using Kangen Water here for the last six months the results of which are nothing short of incredible in so much as we have substantially eliminated the purchases of all chemical additives for our general cleaning including our kitchen floor cleaning and in the main use only PH 11.5 Kangen Water now. We would have reduced our chemical purchases by up to 85% of our previous order given that we now only buy dishwasher additive and minimal wash up liquids. The cleaning is by and large carried out with **cold water** for 90% of the time with an occasional warm water deep clean and the kitchen floors are cleaner than they have been in the entire fourteen year experience of the hotel. The colour of the original grout has reappeared and the entire floor feels and is substantially cleaner without any chemical residue feeling on the tile when touched direct. (This also reduces the slipperiness of the floor thereby helping to avoid slips and falls in this hazardous area.) The obvious consequential reduction of our **impact on the environment** as a result of us not having to use (waste) hot water as well as the illumination of chemical additives is something we are equally as excited about as the consequential **cost savings**.

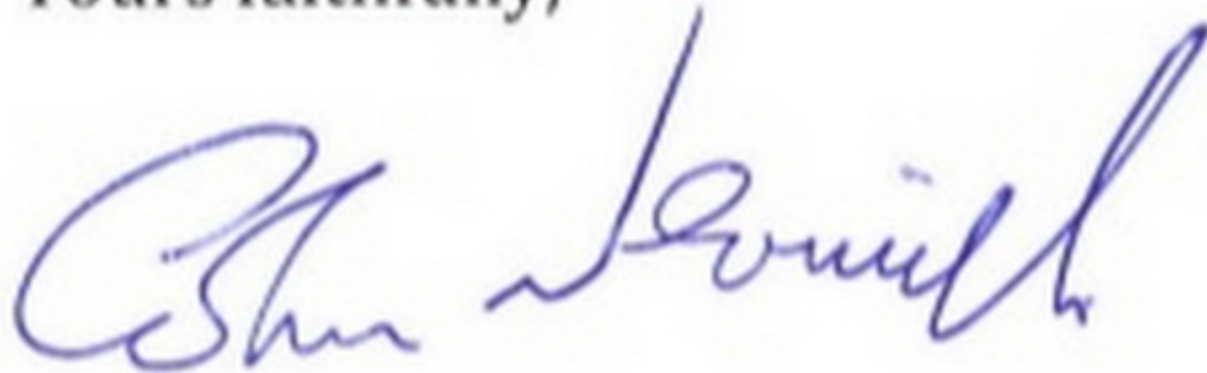

A further substantial benefit is that all of our soups and sauces are now made on PH 9.5 Kangen Water and the enhancement to the flavour is very dramatic. Comparing the same recipe made with and without the Kangen Water highlights the incredible affect that the alkaline water has on the cooking process and we are delighted with its results.

With respect to cleaning down tables and the like we use the PH 2.5 (strong acidic) water for disinfectant to all work surfaces and customer tables and the like. This leaves us confident that the disinfectant effect of this water has all of our surfaces much cleaner and hygienic that they ever have been before coupled with the reassurance that this water when sprayed near food is perfectly safe. It can be even drank in small quantities without any ill effect and therefore is substantially safer around foods etc. than any chemical we may have used in the past.

As stated above, I have no hesitation in recommending the use of Kangen water from an economic, environmental and indeed taste enhancement point of view within our industry. I have found Mr Tom Colton to be most knowledgeable and helpful in ensuring we apply the best practices to maximise the benefits of this water, a factor I believe to be quite important in extracting the benefits of this system and would recommend him as a supplier of the units that produce this water.

Should you have any queries regarding this endorsement I am pleased to take calls to clarify and expand on our experience here in the hotel with this fantastic product.

Yours faithfully,

Colm Neville

Director

The Riverside Park Hotel
